ASTRONOMY	150 -	- Final

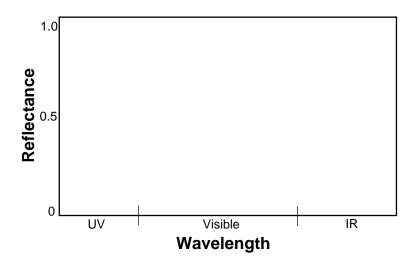

March 14, 2007 (π day!) – Winter 2007

Name: _____

TA's Name & Section:

Answer all questions in the space provided. If you have any questions, raise your hand. 100 points possible. No calculators.

- 1 (3 pts) Saturn's small moon Mimas is saturated with impact craters. What does it mean to be saturated?
 - (a) The addition of more craters would not change the crater density.
 - (b) The addition of more craters will only decrease the crater density.
 - (c) There are no large impact craters.
 - (d) Impacts have released water that has saturated the surface.
 - (e) Volcanic activity has covered most of the craters.
- 2 (8 pts) Explain what I mean when I say that all rocks on the Earth are achondrites.

3 (5 pts) On the graph on the left, sketch the visible reflectance spectra of a carbonaceous chondrite meteorite.

(10 pts) In the space below sketch the R-Plot of the crater population of the highlands of the Earth's foon and the surface of a dead outer solar system satellite (<i>i.e.</i> Callisto).
(8 pts) The most common type of meteorite to hit the Earth is an ordinary chondrite (74% of all meteorites). xplain why this implies that most of the asteroid in the asteroid belt are far less than 500 km in size.

 6 (2 pts) Almost all of the regular satellites in our solar system formed by: (a) Giant Impact (b) Accretion (c) Capture (d) Fission 	
7 (8 pts) I said that inside the Roche Limit of a planet: "Tidal forces win over gravity". Explain what meant by this statement.	I
8 (8 pts) Explain why Halley's comet will not be seen in our skies in a million years.	

9 (8 pts) Only a few of the outer solar system satellites have atmospheres (Titan, Triton). Exp	olain why this
is.	
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around 10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around 10 (8 pts).	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the property of the proper	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the property of the proper	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the property of the proper	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the property of the proper	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the property of the proper	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the state of the state o	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the state of the state o	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the state of the state o	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the state of the state o	and Jupiter.
10 (8 pts) Explain why Io would not be tidally heated if it had a perfectly circular orbit around the state of the state o	and Jupiter.

11 (8 pts) Explain why a typical Kuiper belt object would be more primitive than a typical astero	oid.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.
12 (8 pts) Explain why we believe it would be difficult to form Jupiter-sized planets inside the sno	ow-line.

On the right is a plot of the Radial Velocity vs. Time for two different solar-type stars with planets. Assume that the orbits of the planets are circular and that we are viewing the system nearly edge-on.

13 (8 pts) How do the distances of the planets $\bf A$ and $\bf B$ from their central star compare to the Earth-Sun distance? [Be quantitative, I want some numbers!]

14 (6 pts) Explain why the Hawaiian islands are one of the worst places to collect meteorites.

15 (2 pts) And finally, list the top 100 objects in the solar system.
